

# Andropenis Penis Enlargement Device - FAQ

## Medical Guide of Penis Extenders

### **Q1. What is the principle of a penile traction device?**

**A.** It is based in the medical principle of traction, which when executed in a controlled, gradual and progressive manner on the penis, then Andropenis will stimulate the growth of the penile tissues. The penile traction therapy was invented and patented by Dr. Eduardo Gómez de Diego.

### **Q2. Has traction of penis stretchers been used in medicine before**

**A.** Yes, the principle of traction in modern medicine is used to create new tissue for skin grafts, the elongation of bones and to create new skin with hair to cover bald areas. Also this principle has been used in ancient cultures to create long necks like in the Giraffe Women of Burma and to create longer lips in certain African tribes. Our penile enlargement device uses the same principle.

### **Q3. What is the maximum growth that I can obtain?**

**A.** It all depends on the individual, approximately 4 centimetres (about 1.6") can be obtained with a penile traction device. Be patient and consistent with the treatment, this is the key to achieving your objectives. The first results will be observed 1.5 months into the treatment (the 15 day adaptation period followed by 1 the first month of treatment).

### **Q4. What is the minimum growth that can be obtained?**

**A.** The minimum growth with a penis stretcher is 1.5 cm (0.60"). The average growth is 3 cm (1.2"), based on 95% of the patients, using a penis enlargement device.

**Q5. Is there growth both on erection and flaccidity?**

**A.** Yes, the growth with a penile traction device is proportional and it will be evident in erection as well as in flaccidity. Do not use Andropenis while sleeping, while partaking in strenuous physical activity or sport or while under the effects of recreational drugs or alcohol.

**Q6. Which are the model of the penis stretchers?**

**A.** The Andropenis® extender has the following models: Andropenis Gold® (made with gold, Deluxe version), Andropenis Mini® (for penises smaller than 8 CM in an erect state), Andropeyronie® (made from aluminium, adapted for curvature correction), Andropeyronie® Surgery Edition (made from aluminium, adapted for posyt-surgery usage) and Androextender® (made from aluminium, basic version).

**Q7. Are the results durable of Andropenis penis extender?**

**A.** Yes, because there has been growth of the penile tissues.

**Q8. Will a penile traction device help to correct penile curvature?**

**A.** Yes, in a treatment period of 6 to 7 months with penis stretcher is able to correct more than 60% of the curvature. There will be a substantial improvement.

**Q9. Will the lengthening create a penis thinner with a penis stretcher?**

**A.** No, the increase is proportional throughout the whole penis. There will certainly be a boost in length along with in girth with a penile traction device considering that the new tissue created develops even more quantity and also this volume is filled with brand-new cells, as a result of a cellular multiplication.

**Q10. Will the glans also grow with a penile enlargement device?**

**A.** No, Only the penile shaft is extended and the sensitivity of the glans will not be affected with the penis stretcher.

**Q11. What is the ideal age to increase penis size with a stretcher?**

**A.** From 18 years onward. The treatment with a penis stretcher can be followed by older men as well. Our research includes men of 60 and 70 years of age and it shows that traction will stimulate the growth of tissues at any age.

## **How to Use Guide to Penis Stretchers**

### **Q1. Is there any pain with a penile traction device?**

**A.** No, the medical penis extender is a mechanical stretcher and is painless. The user may at first notice the presence of the extender, but in time this sensation soon disappears. Andropenis can be worn and fixed easily in the penis.

How can I use a penis stretcher without my family finding out?

Use the penis stretcher during working hours or when out of home, we recommend the use of loose clothes in order to prevent people from noticing.

### **Q2. Should I remove the penis extender when urinating?**

**A.** Yes, when finished place the extender back onto the penis.

### **Q3. If I have an erection with the stretcher on, what will happen?**

**A.** Nothing will happen, you will feel a little pressure, but it should be painless. If the erection is really hard, then the penis enlargement device will loose but it will stay in its place.

### **Q4. Can a penile enlargement device be worn while sleeping?**

**A.** Yes, although we do not recommend it. Many of our patients wake up with the extender dislocated because of movement at night or nightly erections. In these cases, the product should only be worn 3 hours per night. We recommend that the penis stretcher shouldn't be worn at night during the first few days of usage or until you feel totally comfortable with handling the device.

### **Q5. Which are the components of the medical penis extender?**

**A.** The components of the penis extender are: 1-plastic base ring, 2-rounded hinge nut, 3-threaded bar, 4-threaded adjustable shaft, 5-metal shaft, 6-screw, 7-spring, 8-screw to secure the spring, 9-large 4 cm rod (1.6"), 10-medium 2 cm

rod (0.8”), 11-small 0.5 cm rod (0.2”),12-smallest rod 0.3 cm (0.1”), 13-upper plastic support, 14-silicone band, 15- protective cushion, 16-silicone rings.

**Q6. Can I wear tight-fit clothing while using a penis extender?**

**A.** You may wear jeans that are not too excessively tight when you are using a penile traction device.

**Q7. If I am seated for a long period of time, can I use an extender?**

**A.** Yes, we will tell you how to modify the penis stretcher for these types of cases.

**Q8. Will a penile traction device rust if exposed to water?**

**A.** Andropenis penis stretcher will not rust. FDA and European Union Certification guarantees that the device is free of defects and guarantees that it has been inspected. The device can be washed once a week with mild soap and water.

**Q9. Should an extender be oiled or greased?**

**A.** At first it is not necessary, but we do recommend that you apply small amounts of oil on the bars of the penis enlargement device in order for it to slide up and down with ease.

**Q10. What is penis extender made of? Does it need batteries?**

**A.** Andropenis extender is totally mechanical. It is used to stretch the penis. It does not require batteries or electricity.

**Q11. How are the first days with the penile traction therapy?**

**A.** The first day, as practice, fit and remove the extender 10 times in a row. It is recommended fitting the device in the upwards position one day, to one side the following day, and to the other side the next day. Every 2 hours, the extender will need to be removed for a few minutes to allow the tissues to relax.
