NEW AQUACEL® EXTRA
Hydrofiber® dressing with strengthening fiber

EXTRA
STRENGTH • ABSORBENCY • CONFIDENCE

More to love about AQUACEL® dressings
Clinicians face many wound management challenges every day

- Retaining and controlling exudate levels to prevent maceration
- Removing harmful bacteria and enzymes from the wound to reduce delayed healing
- Minimizing patient pain and discomfort during dressing changes or when dressing is in situ
- Containing costs while providing effective care

Hydrofiber® Technology, found in the AQUACEL® family of dressings, is uniquely designed to:

- **Lock in** wound exudate and bacteria and reduce lateral spread of fluid
  - Helps protect periwound skin from maceration
  - May help minimize cross-infection and risk of wound infection during removal
- **Micro-contour** to the wound bed
  - Minimizes “dead space” where bacteria can grow
  - Maintains an optimal moisture balance in the wound bed
- **Respond** to wound fluid levels by forming a cohesive gel
  - Unique gelling action protects tender wound tissue and minimizes pain associated with dressing changes

AQUACEL® dressing is supported by a 15-year clinical heritage that demonstrates efficacy

- 17 randomized controlled trials
  - 50+ review papers as well as scientific and animal studies
- Demonstrated evidence of progressing wounds toward healing
- Shown to be a cost-reducing adjunct to a protocol of care

AQUACEL® EXTRA™ dressing takes Hydrofiber® Technology to the next level

- Stitch bonded for extra strength
- More Hydrofiber® Technology for extra absorbency

AQUACEL® EXTRA™ dressing is designed to provide additional benefits

- **EXTRA Strength**
  - 9x stronger dressing
  - Helps facilitate easy removal
  - May increase patient comfort during dressing changes

- **EXTRA Absorbency**
  - 39% greater absorbency
  - More confidently manages exuding wounds
  - May enhance dressing efficiencies

*As compared to original AQUACEL® dressing.

*A new Hydrofiber® dressing with strengthening fiber.*
# AQUACEL® EXTRA™ dressing manages a wide range of exudate levels in chronic and acute wounds
